IIJ ramps up quality with new iS print engine range

Swavesey, Cambridgeshire, UK – 19 August 2014 – [Industrial Inkjet Ltd](#) (IIJ) has launched a new range of cost-effective, compact, single-pass high speed print engines it says will be welcomed by label printers.

The IIJ Colour and MonoPrint iS range, which feature the latest printheads from Konica Minolta, are now commercially available with full variable information software. They run at speeds of up to 50 metres per minute in full colour printing or mono using 6 picolitre drop sizes, which is less than half the previous 14pl size, to provide a huge leap forward in print quality.

The flexibility of the iS systems includes a custom-build service option for all the models – the MonoPrint 72, 142, 282 Slim and 352 Slim and Colour Print 72, 142, 282 and 352.

Print samples will be shown in public for the first time on IIJ's booth 3710 at [Labelexpo Americas](#) at the Donald E Stephens Convention Center, Rosemont, Chicago, from 9-11 September, 2014.

IIJ print engines are designed to be easily integrated into the customer's existing production line. Each is fitted with Konica Minolta printheads, which includes the latest version, the KM1024iM, providing three times the speed of its popular KM1024 head without enlarging the footprint.

Paddy O'Hara, Director of Technology for IIJ, said: "These cost-effective, compact iS systems provide extremely high quality results and are another reason why inkjet is increasingly becoming the printing technology of choice for most industrial applications. This, combined with our experience and Konica Minolta's inkjet offering, will help us grow market share even more, particularly as our print engines are designed to be easily integrated into a customer's existing production line.

He added: "The feedback from customers who have been using the new systems on pilot projects has been extremely positive."

IIJ, an independent company founded by managing director John Corral nine years ago, is also the official sales and technical support centre for Konica Minolta products outside of Asia, offering advice on any aspect of the use of inkjet technology in industrial applications.
